Taylor & Francis出版集团介绍

- 创建于**1798**年，出版**2700**余种学术期刊
 - 最早商业运作学术期刊的出版社
 - 全球最大的社会科学出版社；**40%**的人文社科类期刊被SSCI/A&HCI收录；**70%**的科技类期刊被SCIE 收录
 - **2700+**期刊，**2500+**为Open Select
 - 合作伙伴 – 与**750**家学协会和大学合作；
- 全球网络 – **20** 家代表处遍布全球各大洲：北京、新加坡、东京、牛津、费城、墨尔本
- 旗下品牌：

海南大学订阅内容介绍

- 体育、休闲与旅游学科包：其中81%期刊被Web of Science收录，包含国际体育运动史学会(International Society for the History of Physical Education and Sport)、亚太观光协会(Asia Pacific Tourism Association)等官方刊物。包括3个重要主题领域：

体育：涵盖体育与娱乐、医学研究、健康研究、体育运动历史和体育社会学；

休闲：涵盖休闲娱乐管理、休闲研究、遗产管理和保护；

旅游：涵盖旅游理论与实践

- 根据2019年JCR的数据，HOSPITALITY, LEISURE, SPORT & TOURISM（酒店、休闲、体育和旅游）学科，一共有56个期刊，其中T&F的期刊数量占21种，在该学科类别中期刊的出版量位列第一。

重点期刊- 酒店、休闲、体育和旅游学科

体育、休闲与旅游学科包一直都是Taylor & Francis的一个非常有特色的学科包，包括58种期刊，47种（80%）以上收录于Web of Science，Q1区的期刊有5种，被学术界认定为国际上三大休闲类SSCI期刊也收录在这个学科包里。

Understanding the T cell immune response in SARS coronavirus infection

ce Oh^{1,2}, Samuel Ken-En Gan³, Antonio Bertoletti^{4,5,6} and Yee-Joo Tan^{2,7}

Although the epidemic was contained through the implementation of strict quarantine measures, there is a concern that SARS should re-emerge. Numerous studies have shown that SARS is caused by a novel coronavirus, and that the virus can be transmitted by direct contact with infected individuals, as well as by indirect contact with contaminated surfaces. The virus has also been found in the saliva, urine, and feces of infected individuals. The virus is highly contagious and can cause severe illness, particularly in the elderly and those with underlying health conditions. The World Health Organization (WHO) has declared SARS a global health emergency, and has issued guidelines for the management of the disease. These guidelines include the isolation of infected individuals, the use of personal protective equipment (PPE) by healthcare workers, and the implementation of strict quarantine measures. The WHO has also conducted several studies to investigate the transmission of SARS, and has found that the virus is most likely spread by direct contact with infected individuals. The WHO has also issued a statement that SARS is not a pandemic, and that the disease is unlikely to re-emerge. However, the WHO has also warned that SARS could become a pandemic if the virus is able to spread widely and cause severe illness in a large number of people. The WHO has also issued a statement that SARS is not a pandemic, and that the disease is unlikely to re-emerge. However, the WHO has also warned that SARS could become a pandemic if the virus is able to spread widely and cause severe illness in a large number of people.

Understanding bat SARS-like coronaviruses for the preparation of future coronavirus outbreaks — Implications for coronavirus vaccine development

^aDepartment of Chemistry, National University of Singapore, Singapore.

Abstract
The severe acute respiratory syndrome coronavirus (SARS-CoV) epidemic which resulted in a 10% mortality rate allowed the identification of the human coronavirus NL63 as the best candidate for the preparation of future coronavirus vaccine development

ABSTRACT

ABSTRACT The severe acute respiratory syndrome coronavirus (SARS-CoV) first emerged in 2003, causing the epidemic which resulted in a 10% fatality rate. The advancements in metagenomic techniques have allowed the identification of SARS-like coronavirus (SL-CoV) sequences that share high homology to the human SARS-CoV epidemic strains from wildlife bats, providing concrete evidence that bats are the origin and natural reservoir of SARS-CoV. The application of reverse genetics further enabled the characterization of these bat SL-CoVs. The prediction of their potential to cause disease in humans: The knowledge gained from such studies is valuable in the surveillance and preparation of a possible future outbreak caused by a spill-over of these bat SL-CoVs.

Antiviral applications of RNAi for coronavirus

Chang-Jer Wu[†] & Yi-Lin Chan
Life Science, 2 Pei Ning

Chang-Jer Wu[†] & Yi-Lin Chan
[†]Department of Food Science, 2 Pei Ning Road, National Taiwan Ocean University, Keelung, Taiwan

Until the appearance of severe acute respiratory syndrome (SARS), caused by the SARS coronavirus (SARS-CoV) in early 2003, coronavirus infection was not considered to be serious enough to be controlled by either vaccination or specific antiviral therapy. It is now believed that the availability of antiviral drugs effective against SARS-CoV will be crucial for the control of future SARS outbreaks. Recently, RNA interference has been successfully used as a more specific and efficient method for gene silencing. RNA interference induced by small interfering RNA can inhibit the expression of viral antigens and so provides a new approach to the therapy of pathogenic viruses. This review provides an overview of current information on coronavirus and the application of small interfering RNA in viral therapeutics, with particular reference to SARS-CoV.

Keywords: antiviral agent, cocaine

Search help

Exact match supported for author search results

You can perform an exact author search by enclosing the name (first and/or last) of the author in quotation marks.

Boolean operators

The Boolean operators AND, OR, and NOT can be applied to search terms.

AND (also + or &)

Use AND to search for documents containing two or more terms. For example, the following query returns documents containing both cat and dog:

cat AND dog

The AND operator is applied by default; for example cat AND dog produces the same results as cat dog.

OR

Use OR to search for documents containing at least one of two or more terms. For example, the following query returns documents containing cat, documents containing dog, and documents containing cat and dog:

cat OR dog

NOT

Use NOT to search for documents that do not contain a given term. For example, the following query returns documents containing cat but not containing dog:

cat NOT dog

Abstract

Objective: The object of the present study was to estimate the relationship between maternal vitamin D deficiency during pregnancy and low birth weight by systematically review prevalence studies.

Methods: We collected data from relevant studies published up to April 2019 using predefined inclusion/exclusion criteria. And all the studies were searched in PubMed, Embase, Cochrane Library, and Web of Science.

Results: A total of 16 studies met the criteria and were included in the meta-analysis. When compared with normal serum levels of vitamin D, the maternal vitamin D deficiency had an increased risk of low birth weight (OR = 2.39; 95%CI 1.25–4.57; $p = .008$), and same results were found in the comparison of the mean (the total mean birth weight decreased by 0.08 kg; 95%CI -0.10 to -0.06; $p < .001$).

Conclusion: The evidence from this meta-analysis indicates a consistent association between vitamin D deficiency during pregnancy and an increased risk of low birth weight, and preventing maternal vitamin D deficiency may be an important public health strategy to help decrease the risk of low birth weight.
